

The engine counted it. The agent has to watch it.

Ground truth is SuperTuxKart's own profile-mode counter table, so nothing here is human-annotated.

Weights: items 0.40, spin-outs 0.30, skid seconds 0.30. Item pickups have no HUD readout and carry no signal in the baseline.

Both splits cover the same twelve tracks, so per-track calibration is available and the ceiling stays reachable.

0.023 is a floor, not a ceiling: one author, three iterations, five hand-tuned thresholds, no per-track fitting.
